

WHAT IS THERMOFILM?

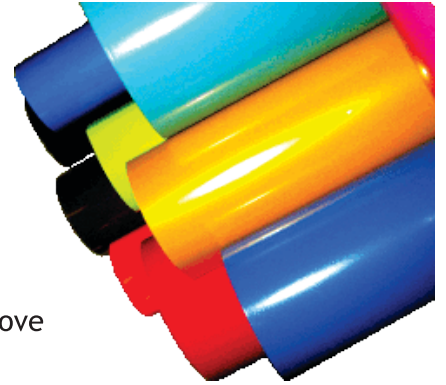

Thermofilm is a heat pressable film which is cut to your design using our Roland Printing/Cutting machine.

The film is then weeded, and then heatpressed onto your garment. These are excellent for small runs and logos/text only requiring 1 colour.

= Cut line. Behind Logo/text can be white or tonal colour

All names to be a minimum of 20mm H or will be added in a box as above on digital film.

THERMOFILM/DIGITAL FILM SAMPLES

FILES & FORMATS

Illustrator:
Text to be converted to outlines/curves so we have the correct font. Placed images to be either embedded or supplied as separate files. Please save the file as version CS4 or Lower.

Corel Draw:
Text to be converted to curves so we have the correct font. Please save as version X5 or lower.

PDF:
Although original files are preferred you can supply a PDF as artwork. Images to be high resolution 300dpi when placed at 100% and any text converted to outlines. Images must be embedded in the PDF.

Fonts:
Any fonts used must be supplied or converted to outlines/curves to avoid font problems.

Electronic art supplied on CD or Zip must come with a colour proof which is indicative of the final product. Wherever possible we request PMS colour references/numbers are supplied.
